

Drains

Drains

EGG DRAIN :

This automatic level operated drain is used when larger amounts of condensate (up to 300l/h) must be discharged from filters, pressure vessels cyclone separators, etc.... It guarantees reliable operation up to 20 bar (290 psig).

Technical data:

- **Operating temperature range :** 1.5 to 65°C (35 to 149°F)

DRAIN KIT :

The Drytec timed drain is very easy to install and is a very reliable system to manage your condensate from compressed air installation.

Specification :

- **Power supply :** 230 V-AC-50/60 Hz (Options : 24 V)
- **Power :** 15 VA
- **Closing time range :** 0.6 to 49 min

Electronic condensate drains:

- The basic principle is contactless measurement of the accumulated condensate. Then it is discharge without the loss of valuable compressed air.
- **Material :** made of aluminum housing with plastic cover, which protects electronics inside the device from outside harmful conditions.
- **Benefits :** aluminum housing, integrated filter mesh, compact design, two-way connections, eloxated housing, contactless measuring, warning LED light for "drain operating" and "alarm", AC versions, IP 54 electrical protection.
